Clinical Interpretation

Expert Analysis

Based on the AI-assisted analysis of the provided MRI scans, the following observations have been made:

- Primary diagnosis indicates **meniscus** with a confidence level of **98%**.
- The AI system has analyzed 3 different views to provide a comprehensive assessment.
- Areas of interest have been highlighted in the heatmap visualizations above.
- The high confidence score suggests a reliable diagnostic assessment.

This report should be reviewed by a qualified healthcare professional for final interpretation and treatment planning.

Important Notice: This report is generated by an AI diagnostic system and should be reviewed by qualified medical professionals. The results should not be used as the sole basis for medical decisions without proper clinical correlation.
